P R E F A C E

The present publication (No. XXIII) contains statistics for the Antarctic season 1947–48 and for the whaling on other grounds in 1948. According to newspaper reports the U.S.S.R. floating factory "Aleut" has been operating off Kamtchatka also in 1948. It has, however, been impossible for the Committee to obtain any statistical data concerning these operations. Reports concerning the whaling results of "Aleut" for 1944, 1945 and 1947 are still not available.

Two shore stations have carried on whaling off Brazil. Reports have been received about the number of whales killed, but data concerning the oil production are wanting.

Otherwise volume No. XXIII should contain complete information about all whaling activities in Antarctic waters during the season 1947–48 and on other grounds in 1948.

The Committee desires to draw the attention to some drafting amendments in the main tables and in the introduction tables. In earlier volumes of International Whaling Statistics the expression "Coast of - - - -" has generally been used to identify certain whaling grounds, as for instance Coast of Portugal, Coast of Norway, Coast of Chile etc. The words "Coast of" have now been omitted, and the grounds are named: Portugal, Norway, Chile.

As usual the statistics include tables recording the whaling results of the various countries separately. In the present publication specifications have also been given for the various countries of the British Commonwealth. See table no. 4, page 26 and table *h* in the introduction.

Oslo, 25th March 1950.

Gunnar Jahn.

Birger Bergersen.

Harald B. Paulsen.

INTRODUCTION

As mentioned in earlier publications of International Whaling Statistics most of the floating factories and many catchers were lost during the war. Immediately after the conclusion of hostilities energetic efforts were made to rebuild the whaling fleet, and the high oil prices during the post-war years have contributed to a more rapid replacement than was anticipated.

The number of whales killed and the output of oil has increased from year to year, primarily as far as the Antarctic whaling is concerned. The summary below reflects the development of the whaling activity during the seasons 1944/45–1947/48 with the succeeding summer operations:

| Season. | Total oil production. Barrels. | Of which: | |
|-------------------------------|-----------------------------------|-------------------------------|---------|
| | In Antarctic. Barrels. | On other grounds. Barrels. | |
| 1944–45 and summer 1945 | 297,954 | 223,540 | 74,414 |
| 1945–46 „ „ 1946 | 948,411 | 818,652 | 129,759 |
| 1946–47 „ „ 1947 | 2,183,714 | 1,939,742 | 243,972 |
| 1947–48 „ „ 1948 | 2,394,087 | 2,104,051 | 290,036 |

Table *a*, on page 8, shows the number of floating factories, shore stations and catchers in activity from 1934–35 to 1947–48. During the last war-season, 1944–45, 1 floating factory and 1 shore station with a total of 15 catchers carried on whaling in the Antarctic. During the first post-war season 9 floating factories, 3 shore stations and 93 catchers were engaged, and the oil production amounted to 818,652 barrels. In 1946–47 15 floating factories, 3 shore stations and 147 catchers were operating in Antarctic waters with a production amounting to 1,939,742 barrels. The increase in the oil production from 1945–46 to 1946–47 is remarkable, even when considering the increase of the whaling fleet. Owing to comprehensive repairs of floating factories and catchers in 1945, one expedition only commenced whaling on the opening day of the season 1945–46, whereas all expeditions but one commenced operations on the opening day in 1946–47. In 1947–48 the whaling material increased with 2 floating factories and 36 catchers, and the whaling fleet during this season accordingly consisted of 17 floating factories, 3 shore stations and a total of 183 catchers. The oil production in the Antarctic in 1947–48 amounted to 2,104,051 barrels, i.e. 164,309 barrels more than in the previous season.

Table a.—Whaling material in operation in the years 1934/35—1947/48.

¹⁾ 1934-35 = Antarctic season 1934-35 and summer 1935, a.s.o.

As commonly known, pelagic whaling is limited to 16,000 blue-whale units. The whaling period in 1946-47 and 1947-48 was fixed at December 8th to April 7th, but on the understanding that whaling should cease if the maximum was reached any time before April 7th. During 1946-47 whaling was carried on throughout the season, i.e. 4 months, with a total result of 15,337.9 blue-whale units. In 1947-48 operations ceased on March 31st, 7 days before the official closing day, because the maximum quota had been reached. Publication No. XXII embraces operations in the Antarctic during 1947-48, and the introduction to that volume contains details of the results.

In areas *outside* the Antarctic the catch has increased steadily from 1945, when the oil production amounted to 74,414 barrels, while in 1948 it had reached 290,036 barrels. This increase is due to the increasing number of shore stations. In 1945, outside the Antarctic, 7 shore stations with 17 catchers participated, while in 1948 36 shore stations, 3 floating factories and a total of 125 catchers were operating. Of these 36 shore stations 7 were new additional stations in operation in 1948 and on the following grounds:

Spanish Morocco,
Paraiba, Brazil,
Sta. Catarina, Brazil,
Norway,
Iceland,
Newfoundland and
British Columbia.

The 2 stations at Paraiba and Sta. Catarina, Brazil, were probably also operating in 1947, but statistics are wanting.

¹⁾ 1927-28 = Antarctic season 1927/28 and summer 1928, a.s.o.

During 1948 operations outside the Antarctic have been carried on in the following areas:

Africa: Natal, Cape Province, Spanish Morocco.

Brazil: Paraiba, Sta. Catarina.

Atlantic and Arctic: Azores, Madeira, Portugal, Norway, Faroe Islands, Iceland, West Greenland and Newfoundland.

Pacific North: California, British Columbia, Japan, Bonin Island.

Other grounds: Peru, Chile, West-Australia.

As mentioned in the preface one Russian floating factory has been operating off Kamtchatka, but no statistics are available.

Table *b*, above, gives the number of whales killed in each year from 1927-28, registered by species. The aggregate number of whales killed in 1946-47 was 34,634, but this increased to 41,989 in 1947-48. The blue-whale catch during the same seasons decreased from 9,301 to 7,151.

Table *c*, on page 10, records the number of whales killed in the various main areas.

It will be observed from this table that of a total catch in 1947-48 of 41,989 whales, 31,318 or 74.6 % were killed in the Antarctic. During the last 2 pre-war seasons about 84 % of all whales were killed in the Antarctic.

From table *d*, on page 10, will be seen the total production of whale-and sperm-oil as well as the proportionate production in the various main areas: Antarctic, North Atlantic and Arctic and Africa. As mentioned

Table c.—Whales killed in the various main areas 1934/35—1947/48.

| Total ¹⁾ | 238,403 | 134,896 | 197,171 | 155,228 | 146,235 | 66,257 | 237,995 | 305,744 |

¹⁾ During the war years 1941/42—1944/45, for which figures are omitted in this table, the total sperm-oil production was as follows: In 1941-42 85,332 barrels, 1942-43 95,436 barrels, 1943-44 30,999 barrels, and 1944-45 31,303 barrels. ²⁾ 1936-37 = Antarctic season 1936-37 and summer 1937, a.s.o. ³⁾ No information received as to production of sperm-oil. ⁴⁾ Calculated. ⁵⁾ 316 Sperm-whales have been caught, but no information has been received re. sperm-oil production.

above, 74.6 % of the whales were killed in the Antarctic, while the oil production in these waters amounted to 87.9 %. This is due to the Antarctic whale being fatter and consequently yielding more oil than the whale killed in other areas.

It will appear from tables c and d that there was a considerable increase in the number of whales killed and the yield of oil in the North Atlantic and Arctic during 1947-48 as compared with previous seasons. Apart from the season 1936-37, the North Atlantic and Arctic catch in 1947-48 was considerably greater than during any other season mentioned as far back as 1934-35.

Table e, above, registers the production of sperm-oil during the period 1936/37-1947/48, specified in respect to the various grounds. The production for last season amounted to 305,744 barrels, the largest production of sperm-oil ever recorded during the period covered by the table. The increase in 1947-48 compared with 1946-47 is mainly due to the greater production of sperm-oil in the Antarctic.

Table f.—Whaling results for the various countries 1934/35—1947/48. All areas.

Number of whales killed.

¹⁾ Different kinds of small whales. ²⁾ Different kinds of small whales and 1 right-whale. ³⁾ 2 Minke-whales and 1 bottlenose. ⁴⁾ As no information has been available re. oil production of one shore-station, it has been calculated on basis of the output of the other shore-station. ⁵⁾ During the war—owing to shortage of food—a number of licenses were issued for whaling on the Norwegian coast. Fishing boats were used as catchers and the whale meat sold for human food. ⁶⁾ Catch result for the shore station and 3 catchers: 3 blue-whales, 27 fin-whales, and 1,391 barrels of whale oil.

¹⁾ Right-whale. ²⁾ Calculate 1. ³⁾ Different kinds of small whales.

Tables *f* and *g* give the total number of whales killed and the oil production in absolute and percentage figures, distributed in respect to the various participating countries. The term country in this sense refers, as far as pelagic whaling is concerned, to the nation under whose flag the floating factories have been operating. As for the shore stations, their whaling results have been registered according to the country where the whaling companies are registered. As mentioned in the preface the catch registered under the British Commonwealth has also been specified separately for the various countries: United Kingdom, Union of South Africa, Newfoundland, Canada, New Zealand and Australia, see table *h*, page 14.

On the basis of measurement-records received, the average size of the whales killed has been calculated. In table *i*, on page 15, the average size of whales killed in 1947–48 and summer 1948 is compared with the corresponding figures from and including 1934–35.

Whaling in the various areas outside Antarctic.

Table *j*, on page 17, embraces the catch in the North Atlantic and Arctic, specified for the various grounds. The catch in 1948 amounted to 1,693 whales killed, yielding 61,016 barrels of oil. Excepting 1937, this is the largest output of oil since 1911.

Table k.—Portugal, Azores, and Madeira.

¹⁾ Whaling is carried on with row-boats on old lines. ²⁾ No specification. ³⁾ The whales have been caught during the period ^{1/1-30/12} 1935—^{31/12} 1936. ⁴⁾ The whales have been caught during the period ^{1/1-30/12} 1937. ⁵⁾ Probably a small number of whales has also been caught from the island of São Miguel and perhaps also from some others of the islands of Azores, but no information is available.

According to table j 1 new shore station has commenced whaling off Norway, thereby bringing the number of stations on the west coast of Norway up to that of 1938. In 1948 1 shore station on Iceland resumed whaling operations with 4 catchers. 239 whales were killed and 9,000 barrels of oil were produced in 1948, the best result recorded for Iceland since 1911. A new company with 1 shore station commenced whaling from Newfoundland in 1948. With a total participation of 3 shore stations and 9 catchers on this ground in 1948, the result amounted to 808 whales, yielding 30,478 barrels of oil. It is necessary to go as far back as to 1905 to record a comparable result.

Table k, above, includes whaling from Portugal, the Azores and Madeira. In 1948 the output of oil in these waters amounted to 23,381 barrels, the largest production recorded for the period included in the table. The reports received from the Azores and Madeira contain no specification as to the species of whales killed. According to information obtained elsewhere, it appears that the catch in these waters consists entirely of sperm-whales. The number of whales killed has therefore been recorded under this item. The catch off the coast of Portugal consists of fin- and sperm-whales.

Table l, on page 20, contains a survey of the catch along the coasts of Africa. As will be seen 1 shore station commenced whaling off Spanish Morocco in 1948. In earlier volumes this table refers to one of the grounds as Cape Colony, but this name is now altered to Cape Province.

Table m, page 21, covers whaling in the Pacific North. The table shows that whaling was resumed from British Columbia in 1948 with 1 shore station and 4 catchers. This station had been closed down since 1943.

From table n, on page 22, one will observe that the number of whales killed in 1948 from Japanese stations was smaller than during the two previous seasons, while the production of oil has increased considerably. As previously mentioned the whale is chiefly used for human consumption, but owing to the great increase in the output of oil last season, it is reason-

¹⁾ No specification. ²⁾ Different kinds of small whales and 5 right-whales. ³⁾ Different kinds of small whales and 2 right-whales. ⁴⁾ No information of the number of shore stations in operation. ⁵⁾ Right-whales. ⁶⁾ The whale is mainly used for human food.

able to conclude that the meat and the blubber of the whale is now also largely used in the oil production.

Table o, below, records the whaling off Kamtchatka. As mentioned in the preface a Russian floating factory was operating on this ground both in 1947 and 1948, but the statistical data are not yet available. International Whaling Statistics are in want of particulars from U.S.S.R. also for the years 1944 and 1945.

The whaling activities on the coast of Chile and Peru have declined during 1948 as compared with the previous season, when

¹⁾ Different kinds of small whales and 36 right-whales. ²⁾ Right whales. ³⁾ The figures for the shore stations on the coast of Chile and the number of catchers attached thereto are not confirmed by the companies. ⁴⁾ No information as to the material in operation off the coast of Chile.

the output of oil was the largest ever recorded on these grounds, see table p above. The decrease is due to the fact that only 1 floating factory was engaged in sperm-whale catching off Peru in 1948 against 2 floating factories the previous year.

Specifications concerning the whaling from New Zealand will be found in table q, below.

Table q.—New Zealand.

| Years. | Species of whales caught. | | | | | | | Oil production. | Expeditions. | | |

¹⁾ No information as to the number of catchers.

In 1949 operations outside Antarctic have been carried on in the same areas as in 1948, excepting Spanish Morocco. In addition whaling has been carried on from French West-Africa with 1 floating factory and 1 shore station and from the coast of Madagascar with 1 floating factory. As commonly known pelagic killing of baleen whales is prohibited in most areas north of 40° south, but the operations of the two floating factories mentioned above were considered as from shore stations, according to the International Whaling Convention of 1946. Whaling from West Australia has been somewhat extended in 1949 compared with 1948.

Statistics covering the summer operations in 1949 will be published in "International Whaling Statistics" No. XXV.

Table No. 7.—Average production of oil per “blue-whale unit” in the summer season 1948.

Other whales are reduced to blue-whale equivalents on the following basis:
 1 blue-whale = 2 fin-whales = $2\frac{1}{2}$ humpbacks = 6 sei-whales.

| Geographical areas. | Company. | Blue-whale equivalents. | Oil production. | |
|-----------------------|----------|-------------------------|------------------------|----------------------------|
| | | | Total. | Per blue-whale equivalent. |
| <i>Africa:</i> | | | Barrels. ¹⁾ | Barrels. ¹⁾ |
| Natal | No. 1 | 320.0 | 29,040 | 90.8 |

Forms used in collecting the statistical returns.

Report on whales caught from _____

by _____ whaling firm in the season 19 —19

¹⁾ The length shall be the length of a straight line from the tip of the snout to the notch between the flukes of the tail.

²⁾) These rubrics must be filled in as exactly as possible.

It is of great importance that all whales caught are recorded on this schedule even if impossible to get them measured. Kindly also see that the sex of all foetuses is stated.

Firm: _____
Fl. f.: _____
Manager: _____
Catching fields: _____

Report on number of whales, oil production, etc.

The season 19

Season commenced _____ **closed** _____

6

When filled in, please return the form to the Bureau of International Whaling Statistics, Sandefjord, Norway.
