Preface

Relevant, timely and high-quality data and statistics are critical to be able to measure the progress towards the Sustainable Development Goals (SDGs). In 2017 the UN agreed on a set of indicators for measuring progress towards the goals and the targets globally. The indicators presented in this statistical annex are built on the Global indicator framework for the Sustainable Development Goals and targets of the 2030 Agenda for Sustainable Development (United Nations, 2017) and based on national data and statistics.

Statistics Norway is the coordinator of the national statistical system in Norway. In our role we acknowledge an increased interest and need for reflecting sustainability and progress towards a sustainable development in Norwegian official statistics. This statistical annex to the report on the Norwegian Voluntary Review has gathered information available in official statistics, from national public information and evaluations of the qualitative indicators measures as well as data collected from the countries for calculations by international agencies custodians to the global indicators. Graphs and tables are mainly based on information already presented at the national indicator platform for the SDGs made available by Statistics Norway and from the Global SDG Database which is maintained by the UN Statistics Division.

From 2020 the Covid-19 pandemic have a significant impact on our society, economy and environment. The Inter-Agency and Expert Group on Sustainable Development Goal Indicators (IAEG-SDGs) has prepared a list of which indicators are expected to be especially important to follow in the coming years to assess the impact this pandemic has on the 2030 Agenda and the SDGs (IAEG-SDGs, 2021). In this annex we have highlighted these indicators by adding the UN symbol for the Corona virus. Although it is too early to observe the consequences in the yearly data presented up to 2020, we follow the situation for the Norwegian society, economy and environment closely and inform our users through a dedicated publication series on our website www.ssb.no/korona.

We recognize that statistical information itself is far from enough to inform a comprehensive agenda such as the 2030 Agenda for Sustainable Development. For some areas, and especially in respect of the climate and environmental goals, a more thorough analysis of historic developments will be decisive for how good the analyzes of future developments will be in years to come. We need to complement the statistical follow-up with research, analyses and independent evaluations from a broad range of actors to monitor the progress towards a sustainable development for both people and the planet.

To compile this collection of data for the SDG indicators we have worked closely with the Ministry of Local Government and Modernisation, The Norwegian Institute of Public Health, The Norwegian Environment Agency and The Norwegian Agency for Development Cooperation. We also thank The Norwegian Communications Authority, The Norwegian Institute of Bioeconomy Research and The Norwegian Biodiversity Information Centre for valuable contributions.

Abstract

The indicators presented in this statistical annex to the Norwegian Voluntary National Review 2021 are built on the Global indicator framework for the Sustainable Development Goals and targets of the 2030 Agenda for Sustainable Development (United Nations, 2017). Information has been gathered from available official statistics, from national public information and evaluations of the qualitative indicators measures as well as the data collected from the countries for calculations by international agencies custodians to the global indicators.

Sammendrag

Dette statistikkvedlegget er utarbeidet til Norges frivillige nasjonale gjennomgang av arbeidet med bærekraftsmålene til FN i 2021. Statistikkvedlegget presenterer indikatorene som er bygget på det globale indikatorrammeverket som følger de 17 bærekraftsmålene i 2030-agendaen for bærekraftig utvikling. Det er samlet inn informasjon fra tilgjengelig offisiell statistikk, fra nasjonal offentlig informasjon og evalueringer, samt data som er samlet inn fra landene for beregninger gjort av internasjonale organisasjoner.
